

ELEC5620 Project Stage 1: Report Submission (15 Marks)

Models	Specifications	Marks
Ad hoc diagram	An ad hoc diagram to describe the overall software design	Optional
Ad hoc requirements *	Each student must individually contribute at least one ad hoc requirement, represented by an informal description.	0.5
Feature diagram(s)	One comprehensive diagram for the entire group. You are encouraged to specify non-functional requirements for the features where possible.	1
Use case overall diagram	One comprehensive diagram that encompasses all architects and stakeholders.	1
Use case specification(s) *	Each student is required to contribute at least one use case specification, with a total of 5 to 10 use cases for the entire group.	2
Architecture Analysis and Design (s)	One analysis (based on the proper selection of viewpoints) and design.	Optional
Elementary Structure Modelling	Detailed design-time structure modeling, create class diagram with proper use of associations such as generalization, composition, aggregation, interfaces, multiplicity, etc.	3
Complex Structure Modelling	Create runtime models based on the classes, using structure modeling techniques effectively, such as object diagram and collaboration.	3
Activity diagram(s) *	Each student must individually contribute at least one activity diagram, modeling specific behaviors.	1.5
Interaction diagram(s) *	Each student must individually contribute at least one interaction diagram, modeling specific behaviors.	1.5
State machine diagram(s) *	Each student must individually contribute at least one state machine diagram, modeling specific behaviors.	1.5
Package diagram	One overall diagram.	Optional
Deployment diagram	One overall diagram.	Optional

Video Presentation (5 Marks): Make a video presentation within 8 minutes. It should introduce your project and overview the key agent roles, functions, use cases and design models. Upload your video to Canvas before deadline and it is recommended you also attach a YouTube link to your presentation.

Interview (10 Marks): The Interview will be conducted during the practical sessions in week 11 and week 12. Every group will be assigned a time slot in the practical session that you belong to in Week 11 or Week 12, and we will ask each member questions.

Important Notes:

- 1. The project requirement documentation must be included as part of the Stage 1 submission. All subsequent design and modeling tasks should be based on your project requirement to ensure consistency and alignment throughout the project.**
- 2. Titles marked with an asterisk (*) indicate that the task is an individual task, and each student must complete this part independently.**
- 3. Every group member must participate in all the group tasks. You need to specify group members' individual contributions in the group tasks, e.g., clearly indicating which part(s) of the diagram is done by one student or the percentage of each member's contribution.**
- 4. In all the individual tasks, the activity diagrams, interaction diagrams, and state machine diagrams you create must be based on your own ad hoc requirement analysis and the corresponding use case specification(s).**
- 5. Regarding the interview order, we will look at your submission time of Assignment 1 and use the reversed order to assign the time slot, i.e., the earlier you submit assignment 1 the later your time slot will be.**
